

Mycoplasma Bovis Fence Protection System

MPI Recommended Buffer

Manufactured to MPI's guidelines for on-farm, biosecurity protection. Providing a cost-effective, permanent fixing, 1m offset outrigger to create a 2m buffer zone. (1m either side of a fence line)

Undulated Ground Strut Bracing

We recommend using Strainrite Bayco Wire only for strut bracing to deal with the undulating ground when the wire pulls the outrigger up or down. The struts can be tied off using a 5mm Strainrite Crimps and stapled to the post. The Bayco wire also acts as an insulator further preventing any potential arcing out.

NZ Made & Built Tough

Dura-tip eliminates wear from wire movement. High strength shaft is manufactured from 7mm galvanised spring steel.
